1.ORGANASATIONAL OVERVIEW & USER PERSONA

Galxboy is a South African streetwear brand owned by Thatiso Dube which has its roots in the underground and rebellious youth street culture that dominates that urban centre of Mzansi. In 2008 while Thatiso was still in high school he saw a gap in the market for a brand that was designed by the youth for the youth in particular millennials as well as Generation Z. It did not just stop there, through ambition, perseverance and teamwork Galxboy was born.

WHAT IS GALXBOY VISION AND MISSION STATEMENT?

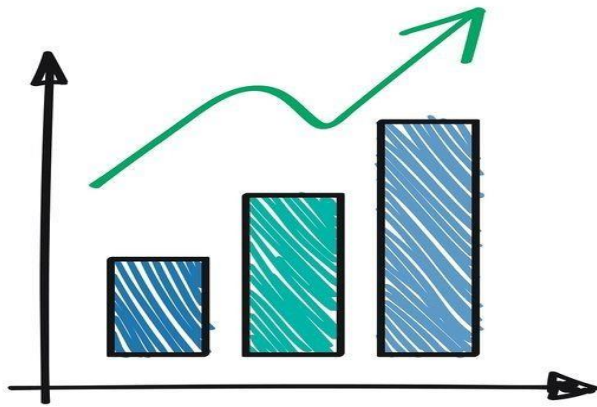

Galxboy vision is it aims to become the leading streetwear brand on the african continent. It also aims to inspire the youth through creative design, innovation, and affordable pricing driven by the brands mantra of “SMART. AFRICAN. AMBITIOUS.”

(GALXBOY 2025)

2. WEBSITE GOALS AND OBJECTIVES

Galxboy aims to increase website traffic because by bringing in more visitors to the site, chances of a potential consumer taking the action to purchase something are very high. They also aim to grow their organic search traffic by at least 30% through search engine optimization.

computer

(PINTEREST 2025)

Galxboy can link KPI's to the main goals of their website by:

1. WEBSITE TRAFFIC

Galxboy can measure how many people visit the website whether it's daily, weekly or monthly. Dave (2024).

2. CONVERSION RATE

Galxboy can check and measure how many people who visited the website took the desirable action like purchasing a product or sign up for a newspaper. Dave (2024).

(PINTEREST 2025)

3.CURRENT WEBSITE ANALYSIS

The current Galxboy website is not user-friendly. It is not easy to navigate and a bit difficult to find information through menus and links. Pages sometimes take time to load and that can increase the chances of visitors leaving. The layout of the website does not adjust properly to different screen sizes. WDG (2025).

4. DESIGN AND USER EXPERIENCE

1. COLOUR SCHEME

A brand, Galxboy to be exact, should feel modern while highlighting the brands connection to youth culture and fashion trends in South Africa since the brands target audience is the youth particular millennials and generation z.

2. TYPOGRAPHY

The typography for galxboy should be modern and easy to read inorder to reinforce the streetwear identity.

3. LAYOUT AND DESIGN APPROACH

The website should have plenty of white space for a clean look and bold promotional banners here and there. A normal and effect website should have a navigation bar, new arrivals, footer etc.

5. DEVELOPMENT TOOLS

Development Tools / Technology Stack

The development of the Galxboy website will be based on fundamental front-end web technologies, namely HTML5 and CSS3. These technologies are widely recognised as standard tools for structuring and designing modern websites.

HTML5 (HyperText Markup Language) will be used to define the structure and semantic layout of the website. It will handle organizing content elements such as headings, images, navigation menus, and product information across various pages, including the homepage and product catalogue.

CSS3 (Cascading Style Sheets) will be applied to control the visual presentation and layout of the website. This includes the use of color schemes, typography, spacing, and responsive design techniques to ensure that the website is visually appealing and accessible across different devices. CSS3 will also play a key role in setting up a consistent brand identity that reflects the modern streetwear aesthetic of Galxboy.

Together, HTML5 and CSS3 will provide a structured, responsive, and visually cohesive user interface, contributing to an effective and engaging user experience.

Sitemap for Galxboy

The GALXBOY website follows a modern fashion e-commerce structure focused on streetwear, luxury apparel, footwear, and accessories. Below is a detailed hierarchical sitemap showing the likely page architecture and navigation flow of the website.

1. Home Page

- Home
 - New Drops
 - Best Sellers
 - Footwear Showcase
 - Testimonials / Reviews
 - Newsletter Signup
 - Footer Navigation

2. Shop Section

2.1 New Arrivals

- Latest Drops
- Trending Items

- Recently Added Products

2.2 Best Sellers

- Most Popular Apparel
- Most Purchased Accessories
- Top Footwear

3. Apparel

3.1 Tops

- T-Shirts
- Long Sleeve T-Shirts
- Graphic Tees
- Vests
- Hoodies
- Sweaters
- Jackets
- Bowling Shirts

3.2 Bottoms

- Pants
- Shorts

3.3 Sets

- Tracksuits
- Matching Kits
- Coordinated Outfits

4. Footwear

- Trainers
- Runners
- Slides
- 012 Sneakers

5. Accessories

- Beanies
- Jewellery
- Watches

7. Product Pages

Each product page typically contains:

- Product Images
- Product Name
- Price
- Size Selector
- Colour Options
- Product Description
- Fabric Information
- Delivery Information
- Add to Cart
- Related Products
- Reviews / Ratings

8. Shopping Features

Cart

- View Cart
- Update Quantity

- Apply Discount Codes

Checkout

- Shipping Details
- Payment Options
- Order Summary
- Secure Payment

Payment Methods

- Visa
- Mastercard
- American Express
- Apple Pay
- Google Pay
- Capitec Pay
- PayFlex
- PayJustNow
- Happy Pay

9. User Account

- Login
- Register
- My Orders
- Wishlist
- Saved Addresses
- Order Tracking
- Account Settings

10. Customer Support

FAQ Section

- Orders
- Shipping
- Payments
- Returns & Exchanges
- Product Authenticity
- In-Store Pickup
- Refunds
- Tracking Orders

Contact Us

- Email Support
- Telephone Support
- Customer Service Hours

11. Footer Structure

- About GALXBOY
- Careers
- Store Locator
- FAQs
- Social Media Links
- Newsletter Signup
- Contact Information
- Policies

REFINEMENTS AND IMPROVEMENTS

From my part 2, I have fixed a few issues that made me lose marks on my previous assignment for this module. My index page has a product page, white background colour and a footer. My about page contains different colours and different fonts of gold and black. The vision and mission of the business is in the middle of the page. The contact page includes the contact form, and it hovers over your email, subject, name and last name, footer at the bottom with quick links, newsletter, slogan, and contact information. JavaScript is included to support navigation and interactivity across multiple pages and the CSS style sheet acts as a visual and layout structure of the entire website. It is organized into sections that correspond directly to different pages and components.
